

bluwoki: Bluetooth Walkie-Talkie for iPhone OS 3.0

Adrian Kosmaczewski

2009-07-15

The first iPhone application under the akosma brand has just been published on the App Store:

bluwoki is a very simple walkie-talkie application, which uses the new GameKit framework available on the iPhone OS 3.0. It is available at the App Store! In English, Spanish and French.

The source code is really simple (around 170 lines of code) and you can get it, as usual, from Github with a BSD license.
