

Student application on the App Store: TroisXRien

Adrian Kosmaczewski

2011-12-13

Remember Sudokulus? It's the application created by one of my students¹ in a previous training. Well, today I have the pride and the joy to announce the second application created by one of our students, and published on the App Store!

2

The application is called TroisXRien³, and it is an application that kids can use to learn arithmetics; select one or many exercises, and kids repeat them until they don't make any more mistakes! Parents can follow the evolution of their kids closely, as the application can send them an email when the training is done.

A very nice idea, beautifully illustrated – Vincent is not only a great school teacher, but also a tremendous cartoonist! (by the way, he's the author of these drawings about akosma⁴ that you can check in our Facebook page⁵ :))

Congratulations Vincent! Let's give his app some download love! It already features lots of 5 star ratings, let's give him more of them!
