

Technology Stacks

Adrian Kosmaczewski

2022-04-15

For the past 20 years there's been this trend to give names to a particular set of operating system, programming language, database tech, and something else. Here goes a list with the most common ones.

- LAMP Linux, Apache, MySQL, PHP/Perl/Python
 - XAMPP Apache HTTP Server, MariaDB, PHP, Perl
 - WAMP Windows, Apache, MySQL, and PHP
 - WIMP Windows, IIS, MySQL, and PHP
 - MAMP macOS, Apache, MySQL or MariaDB, PHP, Perl, or Python
 - DAMP Darwin, Apache, MySQL, PHP
 - LEMP Linux, Nginx, MySQL/MongoDB, PHP
 - AMPPS Apache, MySQL, MongoDB, PHP, Perl and Python
- MEAN MongoDB, Express.js, AngularJS (or Angular), and Node.js
- SAFE Saturn, Azure, Fable, Elmish
- ELK Elasticsearch, Logstash, Kibana
- BCHS BSD, C, httpd, SQLite
- LYME Linux, Yaws, Mnesia (or CouchDB), Erlang
- GLASS Gemstone/S, Linux, Apache, Smalltalk, Seaside
- Jamstack static HTML
- GRANDstack GraphQL, React, Apollo, Neo4j
- XRX XForms, REST and XQuery
- PETAL Phoenix, Elixir, Tailwind, Alpine and LiveView.

These days of DevOps and cloud technologies, we have more of these:

- DevOps Stack
- PLONK Prometheus, Linux/Linkerd, OpenFaaS, NATS, Kubernetes
- SMOKE Serviceful (not just Serverless), Multi-cloud, Open, Kubernetes, Event-driven

And there's more and more stacks. And there's even a comparison platform for stacks.
