

# WWDC Schedules in iCal Format

Adrian Kosmaczewski

2008-05-19

For those attending WWDC, and wanting to have the module complete schedule in iCal (as suggested by TUAW), I've created a small script (using Prototype) that will transform the JSON data of the official WWDC schedule into calendar files, which you can save and load into iCal.

This script was featured in another TUAW entry! Thanks to Mat for the link!

Enjoy! I hope this will be useful to you. By the way, if you're attending WWDC, just leave a comment below.

Update, 2008-05-26: Thanks to Jeff LaMarche for posting a link to the calendars from the cocoadev mailing list, and to Second Gear for using the calendars with their own products! :)
